Kate Arrington is an Associate Professor in the Psychology Department. Prof. Arrington’s interest in the brain grew out of an internship at a traumatic brain injury rehabilitation center as an undergraduate at Furman University. She received her PhD in Cognitive Psychology at Michigan State University in 2002. Following a post-doctoral fellowship at Vanderbilt University, Prof. Arrington began her academic career at Lehigh in 2005. Her current research uses the approaches and methods of cognitive neuroscience to address questions of how people behave in multitask environments, including how they choose to sequence tasks and what effect multitasking has on task performance. Prof. Arrington teaches courses on cognitive neuroscience, attention, and statistics. Her passion for undergraduate education has led her to serve as the Psychology Department’s Director of Undergraduate Studies.
